

# Industrial Capacity building on Energy Efficiency performance in APEC Region

# Background

- Under EWG Strategic Plan  to promote energy efficiency and low carbon communities
- This project  aiming to improve factories' energy performance by using energy management system (ISO 50001)
- Supporting energy intensity reduction goal

# Objectives

1. To enhance factories' knowledge of energy performance improvement according to international standards
2. To evaluate the result of energy performance improvement of the factories
3. To establish report summary and publish to other factories in APEC member economies to use

# Outputs

1. Training program on energy performance improvement with applicable materials
2. 5 factories understand concept of energy performance improvement according to ISO 50001 and be able to establish energy data review
