INTRODUCTION

In the APEC Declaration on a Standards and Conformance Framework, APEC Ministers recognized the importance of closer technical cooperation among APEC members on standards and conformance issues and agreed upon the following objectives for this cooperation:

- to reduce the negative effects on trade and investment flows in the region due to differing standards and conformance arrangements;
- to foster and promote international standardization in furtherance of trade through active participation by APEC members in the development of international standards and conformity assessment practices;
- to facilitate the further development of open, market-driven interdependence in the Asia Pacific region, while making the most efficient possible use of available resources, by:
 - encouraging greater alignment of members' standards with international standards
 - liaising more closely, and developing greater consistency of approach to standards and conformance issues in relevant international bodies
 - making progress on developing mutual recognition of conformity assessment in the region.

The exchange of information on standards, technical regulations and conformity assessment practices and requirements is critical to the fulfillment of these objectives.

This publication is designed to enhance the transparency of standards, technical regulations and conformity assessment requirements which apply in the APEC economies. It provides a central contact point within each APEC economy for obtaining information and responding to questions (or making appropriate referrals) on specific standards, technical regulations and conformity assessment procedures which may apply in that economy. It also contains a listing of contact points for specific regulatory sectors identified in the APEC Standards, Technical Regulations and Conformance Survey which may be used to open direct lines of communication between regulatory officials on issues of common interest.

BASIC FORMAT

Information in this publication was obtained through a survey of APEC members. The survey was designed to identify the relevant contact points for information on specific standards, technical regulations and conformity assessment procedures. In addition to the request for a central contact point, a request was made to identify contact points for specific regulatory sectors identified in the APEC Standards, Technical Regulations and Conformance Survey.
