

**MUTUAL RECOGNITION ARRANGEMENT ON CONFORMITY
ASSESSMENT OF ELECTRICAL AND ELECTRONIC EQUIPMENT**

**APEC EEMRA
Information Interchange Format**

PART 1

Introduction

This format is being prepared to assist member economies participating in the APEC MRA to prepare documentation required for participation in a consistent format.

It is expected that each participating member economy would submit their information in the recommended format to the APEC Secretariat as required by the MRA.

The format is based on the Information Notes on Good Practice for Technical Regulation and therefore provides for information to be supplied for each of the regulatory regimes identified in the notes. There are 7 regimes, they are for products requiring inspection, products requiring licensing, products requiring batch testing, products requiring approval (or certification), products requiring listing or registration, supplier declarations and essential safety requirements. Participating member economies need only provide information relating to the regimes which are in force in their economy. The regimes that are not enforced by the economy need to be noted also, please indicate this by placing 'none' in the standards table on the front of each regime.

Where more than one regulatory system applies within a participating member economy information on each regulatory system should be provided separately.

The format also draws upon the survey on Conformity Assessment of Electrical and Electronic Equipment conducted by the APEC SCSC. The format includes reference to applicable international standards and uses the international convention for describing the relationship of national and international standards, i.e. IDT for identical, MOD for modified, and NEQ for not equal.

When information makes reference to documents or legislation, the documents or legislation should be available on a website for that economy or provided as part of the information supplied to the APEC Secretariat.

PART I – INFORMATION EXCHANGE

Regime Overview

The government agency responsible for electrical appliances is the Superintendence of Electricity and Fuels, SEC, which depends on the Ministry of Energy. The most important legislation is the Supreme Decree of the Ministry of Economy N°298 issued on Nov 10 de 2005, which regulates certification of electrical appliances y de combustibles.

SEC has a list of electrical products which need to be certified in order to be sold onto market. As it is stated on Decree 298, certification can be carried out by next methods:

Sistemas	Denominación	Descripción	Código
1	Test of type followed of the regular control of products	System based on the test of type but with certain action of pursuit, directed to verify that the subsequent production is in agreement. The test of the factory samples implies a regular control of the samples of the models submissive the type test, selected of the production of the manufacturer, before its delivery to the client. The following cases can be distinguished:	
		a) System ISO/CASCO N° 3 for products manufactured and tested in Chile	011
		b) System ISO/CASCO N° 3 for products manufactured abroad, whose test of type is made in Chile, and the tests of the subsequent samples are made abroad.	012
		c) For products manufactured abroad, whose tests of type and the samples of the subsequent lots of products are carrying out in Chile.	013
2	Test of type and factory quality control evaluation tests and its acceptance followed of surveillance that it takes consideration factory quality control audit and factory and market samples test.	System based on the test of type, with evaluation and approval of the manufacturer quality control dispositions, followed of regular surveillance by factory quality control inspection and market and factory samples test. The next cases can be distinguished:	
		a) System ISO/CASCO N° 5 for products manufactured and tested in Chile	021
		b) System ISO/CASCO N° 5 for products manufactured abroad, whose test of type is carry out in Chile and the subsequent factory samples tests are carry out for Chile, abroad.	022
3	Test of lots	The test of lots is a system where one lot of one product or family of products is put under simple test and a verdict is emitted on the conformity with the specification (System ISO/CASCO N°7)	031
4	100% test	The 100% test is a system which all the products are test one by one, according to the requirements ready by the Superintendence of Electricity and Fuel using the protocols of analysis and/or tests. The following cases are distinguished:	
		a) System ISO/CASCO N° 8 for products tested in Chile.	041
		b) System ISO/CASCO N° 8 for products tested "in situ" in Chile.	042
		c) System ISO/CASCO N° 8 for made and tested products abroad.	043

5	Test of type, followed of audit of the system of quality of the manufacturer.	System based on the test of type, followed of annual audits of the system of quality control used by the manufacturer. The following cases are distinguished:	
		a) System ISO/CASCO N° 1 (Test of type) followed of annual audits of the quality system used by the manufacturer, in Chile.	051
		b) System ISO/CASCO N° 1 (Test of type) in Chile, followed of annual audits of the quality system used by the manufacturer, abroad.	052
6	Special	System based on the recognition of certificates of type, approval, seal of quality and mark of conformity, emitted by organisms of certification with address out of the country, followed by the extraction of a sample of one lot, which is put under the analyses and/or tests established in the respective laboratories protocols.	061
7	Mutual Recognition	System based on the mutual recognition in matters of fuel and electrical product certification between the State of Chile and a state or a group of States, and will be rule according to the standards accepted by the parts.	071

There is also the possibility that a certification body authorized by the Superintendency sign an agreement with a foreign laboratory accredited by an IAF member, in order that you can use test reports to certify products (art. 18°, D.S. 298)

Legislative References

Legislation Applicable	Scope of the Legislation	Government Agency
Ministry of Economy's Decree N°298 of 10.11.2005	Certification of Low Voltage Electrical and fuels appliances.	Superintendence of Electricity and Fuel
Law 18.410	Create the Superintendence of Electricity and Fuels and set up their attributions	Superintendence of Electricity and Fuel

1. **PRODUCTS REQUIRING INSPECTION (Not applicable in Chile)**
2. **PRODUCTS REQUIRING LICENSING (Not applicable in Chile)**

3. PRODUCTS REQUIRING BATCH TESTING

This system will apply to:

Each imported or produced batch of the products listed on point 4, which choose this system (System 1 and 3).

4. PRODUCTS REQUIRING APPROVAL (OR CERTIFICATION)

The approval system requires evaluation (type test) of a sample or samples for compliance with a standard or specification set by the Superintendence of Electricity and fuels.

Products can't be sold unless they have approval certificate

The products need to be marked or labeled to indicate that they are certified

Products covered by approvals (or certification)

Description of the Regime

Testing Facilities and Approval (Certification) Agencies

Chile has 10 testing laboratories and 11 certification bodies for electronic and electrical equipment. For full detail refer to Listed of the accredited laboratories available from www.sec.cl

Testing Laboratories

Cam Chile S.A.
CERYLAB LTDA.

Cesmec S.A.
PUCV
Ingcer Ltda.
Laboratorios Certigas / Certelec Ltda.
Lenor Chile Ltda.
Silab Ingenieros S.A.
Under Fire S.A.
Testlab

Certification Bodies

Cam Chile S.A.
Certpro Ltda.
Cesmec S.A.
Ingcer Ltda.
ICOMCER SpA.
INTERTEK LTDA.
Laboratorios Certigas / Certelec Ltda.
Lenor Chile Ltda.
Sical Ingenieros S.A.
Tüv Rheinland Chile S.A.
Under Fire S.A.

Labelling Requirements

The labelling requirements of an approved product are:

- Security warning according to products or technical regulations
- Energy efficiency label as appropriate
- SEC Labeling (QR code) for all products that have received safety approval certificate

Regulatory and Legislation Requirements

The user manual in Spanish language

Mains Voltage, Frequency and Mains Plug Configuration

Country	Mains Voltage and Tolerance	Mains Frequency and Tolerance	Applicable Legislation	Mains Plug Configuration				
				Domestic Standard	Please tick box if mandatory	Relevant International Standard	Extent of Alignment	Diagram of Mains Plug Configuration-
Chile	220 V 380 V ±7,5%	50 Hz		NCh elec 4/2000	<input checked="" type="checkbox"/>	IEC 60884-1 CEI 23-50	-	<p>Technical drawing of a Chilean Type C plug. The drawing shows a top view of the plug with three pins (two round, one square) and a side view of the plug body. Dimensions include a total length of 38mm, a body diameter of 19±0.2mm, and a square pin width of 4±0.06mm. The top view shows a 45-degree chamfer on the pins. Labels include "Plug", "Espiga de fase", and "Espiga de tierra".</p>

5. PRODUCTS REQUIRING LISTING OR REGISTRATION

The products that have mandatory certification are registered in a data base with information that can be read from the qr code mark.

In the absence of a body that certifies a product with mandatory certification, the Superintendency may authorize marketing for 18 months. (Article 9° of the D.S. 298)

General diagram of Certification System
